

Instructions

- Answer all eight questions. Show sufficient working for method marks.
- A calculator may be used unless a question states otherwise.
- Write clearly in the spaces provided. Additional pages may be attached.

1

Explain why ionic compounds conduct electricity when molten but not when solid.

[5 marks]

2

Describe the trend in reactivity down Group 1 and explain it in terms of atomic structure.

[6 marks]

3

Calculate the relative formula mass of calcium carbonate and the mass of 0.25 mol of it.

[4 marks]

4

Explain the difference between a strong acid and a concentrated acid, with an example of each.

[5 marks]

5

Describe a method to prepare a pure, dry sample of a soluble salt from an insoluble base.

[6 marks]

6

State Le Chatelier's principle and apply it to an exothermic equilibrium as temperature rises.

[5 marks]

7

Calculate the number of moles in 12.0 g of carbon-12, showing the relationship you use.

[4 marks]

$$n = \frac{m}{M}$$

8

Balance the equation and identify the limiting reactant when 4 mol of each reactant is supplied.

[5 marks]
