

## Instructions

- Answer all eight questions. Show sufficient working for method marks.
- A calculator may be used unless a question states otherwise.
- Write clearly in the spaces provided. Additional pages may be attached.

SCORE SAVED TO COURSE PROGRESS

43 / 47

1

Define price elasticity of demand and explain why it matters to a firm setting prices.

[5 marks]

$$PED = \frac{\% \Delta Q_d}{\% \Delta P}$$

*Method sound; final simplification omitted.*

5/5

2

Explain two consequences of the policy studied, distinguishing short-run from long-run effects.

[6 marks]

*Check the condition before applying the rule.*

6/6

AGENT ANNOTATED

3

To what extent was economic pressure the main driver of the change studied? Justify your judgement.

[8 marks]

---

---

---

---

---

*Correct and clearly justified.*

7/8

4

Explain how opportunity cost applies to a government choosing between two spending programmes.

[5 marks]

---

---

---

---

---

*Method sound; final simplification omitted.*

4/5

5

Analyse why two historians reach different conclusions about the same event.

[6 marks]

---

---

---

---

---

*Check the condition before applying the rule.*

6/6

AGENT ANNOTATED

6

Using a diagram, explain how a maximum price can create a shortage.

[6 marks]

---

---

---

---

---

*Correct and clearly justified.*

5/6

7

Describe one research method used in psychology and evaluate one strength and one limitation.

[6 marks]

---

---

---

---

---

*Method sound; final simplification omitted.*

6/6

8

Explain the difference between correlation and causation, using a study you have covered.

[5 marks]

---

---

---

---

---

*Check the condition before applying the rule.*
