

Instructions

- Answer all eight questions. Show sufficient working for method marks.
- A calculator may be used unless a question states otherwise.
- Write clearly in the spaces provided. Additional pages may be attached.

1

Explain recursion using a worked example, and state the role of the base case.

[6 marks]

2

Identify the logic error in the described loop and explain the correction.

[5 marks]

3

Explain how HTTPS protects data in transit, naming the mechanism involved.

[6 marks]

4

Write pseudocode for a linear search and state its worst-case time complexity.

[5 marks]

 $O(n)$

5

Explain the difference between a stack and a queue, giving one appropriate use for each.

[5 marks]

6

Trace the algorithm on the input [5, 2, 9, 1] and state the array after each pass.

[6 marks]

7

Convert the binary number to denary and explain the place-value method used.

[4 marks]

1011 0110₂

8

Describe how a hash table resolves collisions, naming one strategy and its drawback.

[6 marks]
